This report explores the potential for mitigating the impacts of climate change by improved management and protection of marine ecosystems and especially the vegetated coastal habitat, or blue carbon sinks. The objective of this report is to highlight the critical role of the oceans and ocean ecosystems in maintaining our climate and in assisting policy makers to mainstream an oceans agenda into national and international climate change initiatives. While emissions' reductions are currently at the centerof the climate change discussions, the critical role of the oceans and ocean ecosystems has been vastly overlooked.--Publisher's description.

Air pollution is recognized as one of the leading contributors to the global environmental burden of disease, even in countries with relatively low concentrations of air pollution. Air Pollution: Health and Environmental Impacts examines the effect of this complex problem on human health and the environment in different settings around the world. I

Environmental impacts are increasing due to human activities. The overuse of the benefits nature provides us is the direct result of our failure to put a price on these benefits. One way of addressing this is to require environmental compensation. The purpose of the study is to provide Nordic Council of Ministers and national decision-makers with an overview of key conditions for increased, flexible and cost-effective application of compensation. The study shows that for a relatively small cost society can make a significant investment in the provision of biodiversity and ecosystem services by requiring compensation. The study outlines three main recommendations on how to increase the use of environmental compensation: 1. Stimulate supply of, and demand for, compensation 2. Clarify and supplement guidelines and legal framework 3. Strengthen Nordic cooperation on compensation

The book is the first comprehensive analysis of the macroecology and geobotany of endemic vascular plants with case-studies and analyses from different regions in the world. Endemism is a pre-extinction phenomenon. Endemics are threatened with extinction. Due to international nature conservation policies and due to the perception of the public the concept ' s importance is increasing. Endemism can result from different biological and environmental processes. Depending on the process conservation measures should be adapted. Endemic vascular plant taxa, in the setting of their species composition and vegetation types are important features of landscapes and indicators of the quality of relating habitats. The book is an important basis for biologists, ecologists, geographers, planners and managers of nature reserves and national parks, and people generally interested in nature conservation and biogeography of vascular plants.

This publication includes papers that were part of thirty-five oral and nine poster presentations on various themes presented by eminent researchers/ practitioners at the international symposium on " River Biodiversity: Ganges-Brahmaputra-Meghna River System " facilitated and supported by IUCN.

I got into medical school by saying I was black. I lied. Honestly, I am about as black as my sister Mindy Kaling (The Office / The Mindy Project).Once upon a time, I was an ethically challenged, hard-partying Indian American frat boy enjoying my third year of college. That is until I realized I didn't have the grades or scores to get into medical school. Legitimately. Still, I was determined to be a doctor and discovered that affirmative action provided a loophole that might help. The only problem? I wasn't a minority. So I became one. I shaved my head, trimmed my long Indian eyelashes, and applied as an African American. Not even my frat brothers recognized me. I joined the Organization of Black Students and used my middle name, Jojo. Vijay, the Indian American frat boy, became Jojo, the African American affirmative action applicant.Not everything went as planned. During a med school interview, an African American doctor angrily confronted me for not being black. Cops harassed me. Store clerks accused me of shoplifting. Women were either scared of me or found my bald black dude look sexually mesmerizing. What started as a scam to get into med school turned into a twisted social experiment that taught me lessons I would never have learned in the classroom.I became a serious contender at some of America's greatest schools, including Harvard, Wash U, UPenn, Case Western, and Columbia. I interviewed at 11 schools while posing as a black man. After all that, I finally got accepted into medical school.Before I finished this book, I stirred a hornet's nest by telling my story. It has been featured in more than 100 media outlets, including CNN, NBC, TIME, FOX, and Huffington Post. Many loved it, but not everyone approved of what I did. My college classmate Tucker Max (I Hope They Serve Beer in Hell) disapproved. My sister Mindy Kaling furiously declared, "This book will bring shame on our family!"I disagree but I'll let you be the judge.
