When shooting portraits focus needs to be precise. The majority of your shots of people will need to have their eyes in perfect focus. Switching to manual focus will give you complete control to enable this rather than having to line up the focusing points on your camera on the eyes prefocussing by pressing halfway down and then having to frame your shot.

**When is Manual Focus Better than Auto Focus?**

What is the difference between Auto Focus and Fixed Focus? \u2022 Autofocus requires some mechanical movement to adjust the lenses to focus the desired object, but the fixed focus lens systems do not move. \u2022 The fixed focus system is always focused to infinity, but the auto focus system can be focused to distances ranging from almost zero to infinity.

An automatic car makes it easier to focus more on speed and road position \u2022 and you can keep both hands on the wheel as you won't have to change gear. You're also unlikely to stall in an automatic \u2022 which saves you the embarrassment of making a hash of hill starts or stalling just as the traffic lights change. Stalling an automatic transmission will only occur if there's a mechanical issue.

Focus of this work are pattern recognition related aspects of computer assisted pronunciation training (CAPT) for second language learning. An overview of commercial systems shows that pronunciation training is being addressed by the growing field of computer assisted language learning only to a small extend, although in the state-of-the-art section a number of such approaches for automatic assessment can already be presented. In the present thesis different approaches are extended and combined. In particular a large set of nearly 200 pronunciation and prosodic features is developed. By this approach pronunciation scoring is regarded as classification task in high-dimensional feature space. Automatic speech recognition is the basis of most pronunciation scoring algorithms. In this thesis a system is presented, which supports second language learning at school, i.e. the target users are children. For this reason a state-of-the-art speech recognition engine is adapted to children speech, since young speakers are only hardly recognised by automatic systems. Phonetically motivated rules for typical mispronunciation errors are integrated into the system to make it suitable for pronunciation scoring. Evaluating an algorithm for pronunciation assessment is more difficult than simply counting the correctly recognised mistakes, since there exists no objective ground truth. This can be shown by evaluating the annotations of 14 teachers. However, with different measures it can be verified that the accuracy of the system (in comparison with teachers) thoroughly reaches the agreement among teachers. The evaluation is conducted with native German speakers learning English.

Worldwide there is a universal need for second language language learning. It is obvious that the computer can be a great help for this, especially when equipped with methods for automatically assessing the learner's pronunciation. While assessment of segmental pronunciation quality (i.,e. whether phones and words are pronounced correctly or not) is already available in commercial software packages, prosody (i.e. rhythm, word accent, etc.) is largely ignored--although it highly impacts intelligibility and listening effort. The present thesis contributes to closing this gap by developing and analyzing methods for automatically assessing the prosody of non-native speakers. We study the detection of word accent errors and the general assessment of the appropriateness of a speaker's rhythm. We propose a flexible, generic approach that is (a) very successful on these tasks, (b) competitive to other state-of-the-art result, and at the same time (c) flexible and easily adapted to new tasks.

The Handbook of Marketing presents a major retrospective and prospective overview of the field of marketing, and provides a landmark reference at a time when many of the traditional boundaries and domains within the marketing discipline have been subject to change. The Handbook frames, assesses and synthesizes the work in the field and helps to define and shape its current and future development. It includes contributions from leading scholars in the field, and the input of an international and extremely distinguished advisory board of marketing academics. The Handbook of Marketing will be invaluable to advanced undergraduates, graduate students and academics in marketing.

While emerging market economies do not have a mature market structure yet, there is a need for research on corporate governance practices in these economies from different perspectives, including corporate social responsibility. Corporate Governance and Corporate Social Responsibility: Emerging Markets Focus fills the gap with a collection of high-quality research and policy-based papers addressing these issues, using various market cases as illustrations.Unlike previous books that often focused on one or several emerging markets, this book covers a much broader set of countries and tackles ethical, legal and societal aspects of corporate governance, beyond financial issues. It also discusses how companies work towards best corporate governance practices, particularly, in the aftermath of recent financial and economic crises. Readers will benefit from the wide range of theoretical, empirical, and case analyses, selected with care to reflect cutting-edge corporate governance and corporate social responsibility issues in countries with emerging markets.

This revision of the classic book on CCTV technology, CCTV Surveillance, provides a comprehensive examination of CCTV, covering the applications of various systems, how to design and install a system, and how to choose the right hardware. Taking into account the ever-changing advances in technology using digital techniques and the Internet, CCTV Surveillance, Second Edition, is completely updated with the recent advancements in digital cameras and digital recorders, remote monitoring via the Internet, and CCTV integration with other security systems. Continuing in the celebrated tradition of the first edition, the second edition is written to serve as a useful resource for the end-user as well as the technical practitioner. Each chapter begins with an overview, and presents the latest information on the relevant equipment, describing the characteristics, features and application of each device. Coverage of aging or obsolete technology is reduced to a historical perspective, and eight brand new chapters cover digital video technology, multiplexers, integrated camera-lens-housing, smart domes, and rapid deployment CCTV systems. Serves as an indispensable resource on CCTV theory Includes eight new chapters on the use of digital components and other related technologies that have seen a recent explosion in use Fully illustrated, the book contains completely updated photographs and diagrams that represent the latest in CCTV technology advancements

This book is the story of the marriage of a new tech]ology, computers, with an old problem, the study of neuroanatomical structures using the light microscope. It is aimed toward you, the neuroanatomist, who until now have used computers primarily for word processing but now wish to use them also to collect and analyze your laboratory data. Mter reading the book, you will be better equipped to use a computer system for data collection and analysis, to employ a programmer who might develop a system for you, or to evaluate the systems available in the marketplace. To start toward this goal, a glossary first presents commonly used terms in computer assisted neuroanatomy. This, on its own, will aid you as it merges the jargon of the two different fields. Then, Chapter 1 presents a historical review to describe the manual tasks involved in presenting and measuring anatomic structures. This review lays a base line of the tasks that were done before computers and the amount of skill and time needed to perform the tasks. In Chapters 2 and 3, you will find basic information about laboratory computers and programs to the depth required for you to use the machines easily and talk with some fluency to computer engineers, programmers, and salesmen. Chapters 4, 5, and 6 present the use of computers to reconstruct anatomic structures, i.e., to enter them into a computer memory, where they are later displayed and analyzed.
