This revised and expanded third edition text utilizes a public health framework and the latest epidemiological, treatment, and service systems research to promote a comprehensive understanding of the organization, financing, and delivery of mental health and substance abuse services in the United States. Written by national experts in the field, this timely work will provide policymakers, administrators, clinicians, and public health and behavioral health graduate students with the knowledge base needed to manage and transform mental health service systems, both nationally and locally. The book is unique in providing a public health framework of the most significant issues facing mental health policy makers, administrators, planners, and practitioners. It combines issues (e.g., evaluation; law; ethnicity) that extend across different age groups, treatment settings, and disorders, with issues that are population and disorder specific. The publication of this book is timely for those involved with the debate over national health care reform legislation, and provides important and timely information (on populations at-risk for mental disorders, services, and systems issues) for those responsible for implementing policies and programs resulting from this reform effort.

This compendium of 17 articles addresses the goals set forth by the President's New Freedom Commission on Mental Health in its 2003 report, *Achieving the Promise: Transforming Mental Health Care in America*. The report represents the first time since the Carter Administration that such a high-level group evaluated U.S. mental health care. The report painted a dismal picture of the nation's mental health system, saying the system was so broken that it was "beyond simple repair." The Commission said that current services focused on "managing disabilities" rather than helping patients

achieve a meaningful life in their communities. It also stated that mental health service providers ignored the preferences of consumers and their families. The articles in *Transforming Mental Health Services: Implementing the Federal Agenda for Change*, originally published between 2006 and 2009 in *Psychiatric Services* (journal of the American Psychiatric Association), offer recommendations to assist adults with serious mental illness and children with serious emotional disturbances. They include a series of reforms in which the emphasis is on recovery as an achievable goal, and the need for a person-centered orientation in service delivery. There is also discussion of the reasons many service providers resist using a recovery orientation and how this can be remedied. *Transforming Mental Health Services: Implementing the Federal Agenda for Change* consists of updates of papers written by the Commission's subcommittees addressing issues fundamental to those living with mental illness. It is organized into four sections: The first focuses on the interface between mental health and general health, and on employment, housing, and Medicaid financing. The second continues addressing financing and Medicaid as well as issues related to school mental health, recovery, transformation of data systems, and acceleration of research. The third includes reports from four states with transformation initiatives designed to ensure that consumers have a strong voice in the development of recovery-oriented services. The final section describes progress five years after the President's Commission Report and concludes with a proposal by the current director of the Center for Mental Health Services for a public health model of mental health care for the 21st century. This compilation of well-researched and well-written articles offers an excellent resource for frontline care providers, facility administrators and advocates. It serves as an equally valuable resource for state policy makers who wish to present a convincing case that change is happening and that the recommendations can be translated into effective policies. Although consumers and their families will receive support for their perception that service providers ignore their

needs, they will also be encouraged that change for the better is coming to the U.S. mental health care system.

A Public Health Perspective of Women ' s Mental Health Edited by Bruce Lubotsky Levin and Marion Ann Becker As many as one-half of all women in the U.S. will experience some form of mental illness in their lives—an especially distressing fact when health care budgets are in flux, adding to existing disparities and unmet health needs. Written from a unique multidisciplinary framework, A Public Health Perspective of Women ' s Mental Health addresses today ' s most pressing mental health challenges: effective treatment, efficient prevention, equal access, improved service delivery, and stronger public policy. Eminent clinicians, researchers, academicians, and advocates examine the effects of mental illness on women ' s lives and discuss the scope of clinical and service delivery issues affecting women, focusing on these major areas: Epidemiology of mental disorders in girls, female adolescents, adult women, and older women. Selected disorders of particular concern to women, including depression and postpartum depression, eating disorders, menopause, chemical dependence, and HIV/AIDS. Mental health needs of women in the workplace, rural areas, and prisons. Racial and ethnic disparities and their impact on service delivery. Parenting and recovery issues in mothers with mental illness. Women ' s mental health services in an era of evidence-based medicine. Improving women ' s health in today ' s technological climate. A Public Health Perspective of Women ' s Mental Health is a resource of immediate importance to professionals and graduate students in the public health, health administration, health disparities, social work, behavioral health, and health services research fields, as well as nursing, community/health psychology and community/public psychiatry.

Mental health-substance use is a complex interrelation, with equally complex implications for individuals and their families, health professionals and society. Although its international recognition as an issue of critical importance is growing, clear guidance for professionals on mental health-substance use and its treatment is hard to find. The Mental Health-Substance Use series addresses this need, concentrating on concerns, dilemmas and concepts that impact on the life and well-being of affected individuals and those close to them, and the future direction of practice, education, research, services, interventions, and treatment. Having outlined the field and service development in previous books, the third book in the series explores how professionals can best respond to the particular concerns and dilemmas arising from and in mental health-substance use for individuals and their families. It aims to inform, develop and educate these responses by sharing knowledge and enhancing expertise in this fast-developing field by exploring the interrelated psychological, physical, social, legal and spiritual experiences. The volumes in this series are designed to challenge concepts and stimulate debate, exploring all aspects of the development in treatment, intervention and care responses, and the adoption of research-led best practice. They are essential reading for mental health and substance use professionals, students and educators.

Clinicians are growing more aware of the extent of mental health concerns in today's workforce. Organizations now need to contend with issues related to disruptive psychopathological behaviour. The Handbook of Mental Health in the Workplace is a timely reference tool to assist researchers and academics in the fields of occupational psychology and human resource management. It includes papers

from expert contributors that provide the latest research and up-to-date developments in this area. This Handbook stimulates new perspectives on established theories and generates practical, yet rigorous, solutions to new problems.

The author establishes a new foundation for the use and value of clinical empathy that is based on a distinction between treatment and healing, and a model for using psychotherapy as a component of an organized system of care: focused, attuned to the patient's presenting motive, and consistent with our understanding of the relationship between mind and brain.
