Animal Nutrition BASF is a global supplier of innovative feed additives for livestock, aquaculture, and companion animals. Feeding more animals for the growing global meat, milk and egg demand while saving the planet's resources and environment is the key challenge: for the feed industry, for farmers, and for us.

Animal Nutrition - BASF

The BSAVA strongly recommends that the neutering of companion animals should be considered for reasons of population control and the prevention of unwanted litters. The decision as to whether to neuter the individual animal for medical or behavioural reasons needs to consider factors such as species, sex, breed and age of the animal as well as current and future health status.

Neutering of Dogs, Cats, Rabbits and Ferrets

Applied Veterinary Clinical Nutrition provides current, clinically relevant nutritional advice intended for use in daily canine and feline practice. Highly practical, the book emphasizes solutions for integrating nutrition into clinical practice, with introductory chapters covering the foundation and science behind the recommendations and extensive references for further reading.

This BSAVA Manual is a handbook for veterinary practitioners and students, biological scientists and nutritionists, with an interest in nutrition and feeding of companion animals. It addresses the ever increasing dimension of dietary management, in both health and disease, in the daily conduct of companion animal practice. The book aims to bridge the knowledge gap between theoretical nutrition and the practical feeding of healthy or sick animals. It systematically covers food types, dietary needs and appropriate feeding of dogs, cats, other small mammals, reptiles, birds and fish in health and sickness. BSAVA, BVNA and FECAVA members can claim their member discount by ordering direct from: British Small Animal Veterinary Association Woodrow House, 1 Telford Way, Waterwells Business Park, Quedgeley, Gloucester, GL2 4AB, Tel: 01452 726709, Fax: 01452 726701, E-mail: publications@bsava.com

Directed primarily towards professionals outside of the United States, this text applies theory-based knowledge to everyday veterinary practice through the use of case studies and clinical examples.

This comprehensive guide provides diet and feeding recommendations for both healthy and sick animals. Recommendations are based on a physical and nutritional assessment of the patient, and the wishes and abilities of clients. Suggested dietary interventions are assessed based on indications, possible adverse reactions, contradictions, and ongoing evaluation.

How well can you answer pet owners' questions about proper diet and feeding? Canine and Feline Nutrition, 3rd Edition describes the role of nutrition and its effects upon health and wellness and the dietary management of various disorders of dogs and cats. By using the book's cutting-edge research and clinical nutrition information, you'll be able to make recommendations of appropriate pet food and proper feeding guidelines. Pet nutrition experts Linda P. Case, MS, Leighann Daristotle, DVM, PhD, Michael G. Hayek, PhD, and Melody Foess Raasch, DVM, provide complete, head-to-tail coverage and a broad scope of knowledge, so you can help dog and cat owners make sound nutrition and feeding choices to promote their pets' health to prolong their lives. Tables and boxes provide quick reference to the most important clinical information. Key points summarize essential information at a glance. A useful Nutritional Myths and Feeding Practices chapter dispels and corrects common food myths. New clinical information covers a wide range of emerging nutrition topics including the role of the omega-3 and omega-6 fatty acid families in pet health and disease management. Coverage of pet food safety and pet food ingredients includes both commercially and home-prepared foods and provides answers to pet owners' questions on these topics. Completely updated content reflects the latest findings in clinical nutrition research. Information regarding functional ingredients and dietary supplementation provides a scientifically based rationale for recommending or advising against dietary supplements. Guidelines for understanding pet food formulations and health claims differentiate between "market-speak" and actual clinical benefits for patients, with practice advice for evaluating and selecting appropriate foods.

* covers the essentials of nutrition in an impartial and lighthearted way * user-friendly layout makes animal nutrition interesting and fun, helping students easily understand the principles of nutrition * includes excellent section on the nutritional needs of small furrries with previously unpublished material * essential reading for every veterinary undergraduate and veterinary nurse * deals with all areas covered in the City & Guilds Small Animal Nutrition Certificate

Manual of Clinical Procedures in Dogs, Cats, Rabbits, and Rodents is the third edition of this esteemed veterinary medicine classic. The Third Edition offers readers expanded coverage of small exotic mammals such as gerbils, hamsters, and guinea pigs, alongside a thorough revision of the common procedures for dogs, cats, and rabbits. Organized in the same user-friendly format of earlier editions, the Manual is an essential purchase for small and exotic animal veterinarians and veterinary technicians.

Updating recommendations last made by the National Research Council in the mid-1980s, this report provides nutrient recommendations based on physical activity and stage in life, major factors that influence nutrient needs. It looks at how nutrients are metabolized in the bodies of dogs and cats, indications of nutrient deficiency, and diseases related to poor nutrition. The report provides a valuable resource for industry professionals formulating diets, scientists setting research agendas, government officials developing regulations for pet food labeling, and as a university textbook for dog and cat nutrition. It can also guide pet owners feeding decisions for their pets with information on specific nutrient needs, characteristics of different types of pet foods, and factors to consider when feeding cats and dogs.

Companion animals are undergoing previously un contemplated treatments and surviving what would once have been rapidly fatal conditions. This NEW Manual is aimed at the whole veterinary team, drawing on all their skills to help patients achieve as full a function and quality of life as possible after surgery, trauma or disease, and to manage chronic conditions effectively for the benefit of animal, owner and the practice team. Part One discusses the principles of rehabilitation, supportive and palliative care. The science behind pain and its management, clinical nutrition and physical therapies is explored, and clinical applications reviewed with reference to published evidence of efficacy and/or effectiveness. In Part Two, this truly innovative Manual presents a collection of Case Studies across a range of canine and feline patients - from discospondylitis to glaucoma in dogs and from triaditis to leg amputation in cats. The following are considered for every case, with expert assessment from the contributors to Part One of the book: • Acute and chronic pain management • Fear, stress and conflict concerns • Nutritional requirements • Physiotherapy • Hydrotherapy • Acupuncture • Nursing and supportive care • Owner advice and homecare recommendations.

Companion Animal Care and Welfare: The UFAW Companion Animal Handbook presents a comprehensive, accessible and practical reference for all parties seeking information about the proper care of companion animals. Identifies the needs of companion animals, explains how we know these needs, and gives scientifically-backed advice on how to meet these needs Promotes the most humane treatment and best possible care of our companion animals Addresses controversial issues such as selective breeding, companion animal showing, the keeping of exotic species, and the international pet trade Covers the husbandry and care of all major companion animal species, including mammals, birds, fish, reptiles and amphibians
