Students learn about important subjects by relating them to events and things that occur in their everyday lives. A wealth of interesting activities provide a detailed look into each subject. Easy-to-use activities can be completed individually at school or at home, though a few hands-on experiments require group work and data sharing. A great supplement to any existing curriculum Explores biology topics such as the characteristics of living things, the chemistry of biology, ecology and environment, animals, diseases, and microbes.

Highlands of Victoria. The book integrates data on forests, carbon, fire dynamics and other factors, building on 6 years of high-quality, multi-faceted research coupled with 25 years of pre-fire insights. Topics include: the unexpected effects of fires of varying severity on populations of large old trees and their implications for the dynamics of forest ecosystems; relationships between forest structure, condition and age and their impacts on fire severity; relationships between logging and fire severity; the unexpectedly low level of carbon stock losses from burned forests, including those burned at very high severity; impacts of fire at the site and landscape levels on arboreal marsupials; persistence of small mammals and birds on burned sites, including areas subject to high-severity fire,

and its implications for understanding how species in this group exhibit post-fire recovery patterns. With spectacular images of the post-fire environment, Mountain Ash will be an important reference for scientists and students with interests in biodiversity, forests and fire.

When it s just not possible to take students out to explore the natural world, bring the natural world to the classroom. Clearly organised and easy to use, this helpful guide contains more than 50 science lessons in six units: Greening the School, Insects, Plants, Rocks and Soils, Water, and In the Sky. All lessons include objectives, materials lists,

procedures, reproducible data sheets, ideas for adapting to different grade levels, discussion questions, and next steps. Almost all the needed materials are inexpensive or even free (such as leaves and rocks), and if you do get the chance to venture outside, the lessons will work there, too. By using Steve Rich's follow-up to his popular book *Outdoor Science: A Practical Guide*, you can introduce students to everything from bug zoos to the Sun and stars without ever needing to pull on a jacket.

Hands-on investigations give scientists in grades 3–4 the skills they need for success! *Skill-Building Science* includes lessons, activities, and writing exercises on physical science, earth science, and life science. Biographies of scientists with

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science

major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that
