The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I

covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

Aging, Health and Technology takes a problem-centered approach to examine how older adults use technology for health. It examines the many ways in which technology is being used by older adults, focusing on challenges, solutions and perspectives of the older user. Using aging-health technology as a lens, the book examines issues of technology adoption, basic human factors, cognitive aging, mental health, aging and usability, privacy, trust and automation. Each chapter takes a case study approach to summarize lessons learned from unique examples that can be applied to similar projects, while also providing general information about older adults and technology. Discusses human factors design challenges specific to older adults Covers the wide range of health-related uses for technology—from fitness to leading a more engaged life Utilizes a case study approach for practical application Envisions what the future will hold for technology and older adults Employs a roster of interdisciplinary contributors

An insider's detailed chronicle of the inner workings of the contemporary art world. The world of contemporary art has become more globalized and transparent in the last few decades, yet it is still perceived as closed-off and obscure. In *A Year in the Art World*, Matthew Israel takes the reader on a cross-continental journey through a year in the field of art, lifting the veil on a culture that emerges as diverse, adventurous, nuanced, and meaningful. From Los Angeles and New York to Paris and Hong Kong, Israel encounters artists, curators, critics, gallerists, and institutions, uncovering the working lives of these art-world figures from the renowned to the unseen. Drawing on exclusive interviews and expertly researched content, Israel ventures into the inner workings of the art industry to ask: What is it that people in the art world actually do? What drives interest in working with art? How do artworks acquire value? And how has technology transformed today's art world? Anchoring the narrative in the history, economics, and cultural dynamics of the field, this fascinating story reveals how "the art world" describes a realm that is both surprisingly vast and deeply interconnected.
