~~Basic Immunology focuses on substances that take part in serological reactions, including antigens, antibodies, and the physicochemical nature of immunological reactions. The selection first elaborates on the basic notions of immunity, antigens, immunoglobulins, and the production of antibody. Discussions focus on factors which increase the immune response, production of antibody, biological properties of immunoglobulins, evolution and control of immunoglobulin structure, antigenicity, specific immunity, and resistance. The text then takes a look at the complement system, antigen-antibody reactions, and immediate hypersensitivity. The book ponders on cell-mediated immunity and delayed hypersensitivity, transplantation immunology, and tumor immunology. Topics include production of immunity to neoplasms, immunological aspects of carcinogenesis and growth of established tumors, immunotherapy for experimental neoplasms, donor selection in human-organ transplantation, elicitation of delayed hypersensitivity, and the role of humoral factors in the transfer of delayed hypersensitivity. The selection is a valuable reference for medicine students and researchers interested in basic immunology.~~

~~Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand.We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.~~

~~Written by Dianne Inglis and Jeffrey Kenneally, the workbook includes more than 70 paramedic-focused clinical skills that link underpinning theory and knowledge with expectations for contemporary clinical practice. To ensure the skills are performed correctly and to standard, the resource is further strengthened with a ready-made assessment tool, ideal for both self-directed learning and instructor use. The text is designed for practising skill development, and preparation for assessment and clinical placement. Clinical Skills for Paramedic Practice 1e includes two key components: practical skill instruction and the Objective Structured Clinical Examination (OSCE) assessment checklist. The skills sections contain clear step-by-step written and photographic instruction in basic to advanced clinical skills, with rationales provided to enhance knowledge acquisition and clinical decision-making. The OSCE checklists allow students and instructors to easily track and assess progress in skill development. Step-by-step skill instruction combined with an OSCE assessment checklist Structured reflection and end-of-chapter questions to assist with deeper understanding of key concepts and application to practice Designed specifically for use by Australian and New Zealand paramedics An eBook and downloadable skill and assessment sheets are included with purchase of the print book Additional resources on Evolve • An eBook on VitalSource Student and Instructor Resources on Evolve: Clinical skill work instructions Formative Clinical Skill Assessment (F-CSAT) Summative Clinical Skill Assessment (S-CSAT) Performance Improvement Plan (PIP) Formative Clinical Skill Assessment (F-CSAT) Key Direct Observation of Procedural Skills (DOPS)~~

~~"Microbiology covers the scope and sequence requirements for a single-semester microbiology course for non-majors. The book presents the core concepts of microbiology with a focus on applications for careers in allied health. The pedagogical features of the text make the material interesting and accessible while maintaining the career-application focus and scientific rigor inherent in the subject matter. Microbiology's art program enhances students' understanding of concepts through clear and effective illustrations, diagrams, and photographs. Microbiology is produced through a collaborative publishing agreement between OpenStax and the American Society for Microbiology Press. The book aligns with the curriculum guidelines of the American Society for Microbiology."--BC Campus website.~~

~~Using the classic images of physician-artist Frank H. Netter, as well as other talented artists, this book offers a unique visual approach to learning the basic principles of pharmacology. Classified by specific organ systems, each chapter shows how drugs are used for specific disorders of that system. The authors also include clear, concise notes under each image, highlighting the important elements of each principle.~~

~~With its focused review of common cases, high-yield content, and test prep strategies, Dr. Mayur K. ~~All pathology residents must have a good command of clinical chemistry, toxicology, immunology, and laboratory statistics to be successful pathologists, as well as to pass the American Board of Pathology examination. Clinical chemistry, however, is a topic in which many senior medical students and pathology residents face challenges. Clinical Chemistry, Immunology and Laboratory Quality Control meets this challenge head on with a clear and easy-to-read presentation of core topics and detailed case studies that illustrate the application of clinical chemistry knowledge to everyday patient care. This basic primer offers practical examples of how things function in the pathology clinic as well as useful lists, sample questions, and a bullet-point format ideal for quick pre-Board review. While larger textbooks in clinical chemistry provide highly detailed information regarding instrumentation and statistics, this may be too much information for students, residents, and clinicians. This book is designed to educate senior medical students, residents, and fellows, and to "refresh" the knowledge base of practicing clinicians on how tests are performed in their laboratories (i.e., method principles, interferences, and limitations). Takes a practical and easy-to-read approach to understanding clinical chemistry and toxicology Covers all important clinical information found in larger textbooks in a more succinct and easy-to-understand manner Covers essential concepts in instrumentation and statistics in such a way that fellows and clinicians understand the methods without having to become specialists in the field Includes chapters on drug-herb interaction and pharmacogenomics, topics not covered by textbooks in the field of clinical chemistry or laboratory medicine~~
