The problem i having is it seems that the engine seems to be struggling (i think due to all the extra weight and the larger tyres) and fuel economy is shocking. I am pretty new to suzukis so i was thinking to converting to a v6 h25a engine (or something better) or is there something you can do to the j20a engine to give it that more power.

This book will appeal to a broad range of engineers and managers in all sectors of manufacturing engineering, power generation and transport. Drawing on their specialist experience and knowledge, the many contributors show how the careful application of correct lubrication can lead to improved productivity, longer plant and equipment life and higher profits. Throughout the emphasis is on showing what lubricants can do, and how they can best be used. After introductory chapters that summarise the basic theory and the general types and properties of lubricants, there follow eleven chapters that cover such specific applications as diesel and petrol engines, hydraulics, compressors, machine tools and cutting oils. The last two chapters discuss the storage and handling of lubricants, and lubrication planning. The majority of the authors and editors, have worked for Esso Petroleum Company Limited and have a unique range of experience in this area. Many of the authors have contributed to advances in techniques for improved lubrication in their specialist areas.

This comprehensive resource discusses all the major aspects of automotive and engine lubrication - presenting state-of-the-art advances in the field from both research and industrial perspectives. This book should be of interest to mechanical, lubrication and automotive engineers, automotive and machinery designers as well as undergraduate and graduate students in these fields. Written by over 100 experts from 16 countries, it reviews the methods developed to measure bearing film thickness and the correlations that have been calculated between film thickness and viscosity, introduces a physico-mechanical model to explain the role played between the detergency phenomenon for engines by the internal stress developed in the film during its gels state, considers the factors affecting oil consumption and the tests created to ensure acceptable levels of service in the field under arduous operating conditions, details lubricant specification for farm tractors as well as technical aspects of the compromises to consider in attempting rationalization, examines the function, use and application of automatic transmission fluids and the requirements, test procedures and original equipment manufacturers' specifications. Containing more than 675 literature references and over 650 drawings, photographs and equations.
