Success as a day trader will only come to 10 percent of those who try. It's important to understand why most traders fail so that you can avoid those mistakes. The day traders who lose money in the market are losing because of a failure to either choose the right stocks, manage risk, and find proper entries or follow the rules of a proven strategy. In this book, I will teach you trading techniques that I personally use to profit from the market. Before diving into the trading strategies, we will first build your foundation for success as a trader by discussing the two most important skills you can possess. I like to say that a day trader is two things: a hunter of volatility and a manager of risk. I'll explain how to find predictable volatility and how to manage your risk so you can make money and be right only 50 percent of the time. We turn the tables by putting the odds for success in your favor. By picking up this book, you show dedication to improve your trading. This by itself sets you apart from the majority of beginner traders.

Get Access to the Best Trading Strategy Available today! Here is a simple and reliable method to make money in stock, ETF, futures, and forex markets without quitting your day job. This book offers you a simple and reliable trading system that you can use right away with no guessing or tweaking required. It comes with a trend filter that helps you to understand the strength of the existing trend and a momentum filter that you can tweak to fit your own trading style and to increase its robustness. The mechanics of this system were first unveiled in a public forum several years ago. The author takes it to the next level by using daily charts as the primary trading time frame and adding a trend and momentum filter. If you follow this system correctly, you will be taking only high probability trades. The system will keep you in the trade for as long as the trend is running strong so that you will not be leaving money on the table by exiting too soon. With this system in your trading arsenal, you will not be making the mistakes most traders make, especially over-trading and over-analyzing, the main reasons why most traders are not profitable. This book is a must-read for anyone starting their journey into trading, or even experienced traders who are not getting the results they want from trading. It is ideal for people who work full time or those with busy schedules. You'll learn how successful traders make money by consistently trading trends—and how you can copy that success. This book is short and can be easily finished within a couple of hours. It provides simple and easy to follow trading rules, and can dramatically change your financial prospects! For less than what you would pay in commission on one trade, this book would be the best investment (of money and time) you have ever made. If you want to fast-forward your learning curve and learn to trade effectively as quickly as possible, read this book and give yourself a head start against the 90% of traders who consistently lose.

This study is an exploration of the Indian stock market, focusing on the possible presence of momentum trading. One thing, however, should be noted. While it is true that momentum trading, which tends to generate speculative bubbles, may result in a financial market crash, its nature in contrast might depend on the nature of the economy itself. The study, while exploring the presence and nature of momentum trading on the Indian stock market in recent years, seeks to relate it to significant structural breaks in the Indian or global economy. To be precise, it outlines a potential correlation between the instability in the stock market and the speculative trading on the market, exploring the question of whether it is human psychology that drives financial markets. In the process, the choice of a significant structural break has been obvious: the global financial meltdown of 2007-2008 – a crisis that has often been referred to as the worst ever since the crash of 1929. While analyzing the nature of momentum trading on the Indian stock market with regard to the financial crisis of 2007-08, the study takes into account two major representatives of the market, the BSE (Bombay Stock Index) and NSE (National Stock Index), for the period 2005 to 2012. This study seeks to answer a few important questions. First of all, it tries to unveil the underlying structure of the market. In doing so, it examines the following issues: (i) What was the latent structure of the Indian stock market leading up to the crisis of 2007-08? Does the structure offer insights into designing profitable trading strategies? (ii) Is it possible to construct a profitable portfolio on the Indian stock market? (iii) Is there any profitable trading strategy on the Indian stock market? While exploring these issues, the study delves deeper, breaking the whole period down into two sub-periods, before the crisis of 2008 and after the crisis. The purpose of this division is to determine whether there has been any discernible change in the market structure since the shock.
