restructuring of the global economy. Seventeen geographers, economists, political scientists and sociologists drawn from all over the world present new work on the production and consumption of money.

"Newly emerging cryptocurrencies and blockchain technology present a challenging research problem in the field of digital politics and economics. Bitcoin—the first widely implemented cryptocurrency and blockchain architecture—seemingly separates itself from the existing territorial boundedness of nation state money via a process of algorithmic decentralisation. Proponents declare that the utilisation of cryptography to advance financial transactions will disrupt the modern centralised structures by which capitalist economies are currently organised: corporations, governments, commercial banks, and central banks. Allegedly, software can create a more stable and democratic global economy; a world free from hierarchy and control. In *Money/Code/Space*, Jack Parkin debunks these utopian claims by approaching distributed ledger technologies as a spatial and social problem where power forms unevenly across their networks. First-hand accounts of online communities, open source software governance, infrastructural hardware operations, and Silicon Valley start-up culture are used to ground understandings of cryptocurrencies in the 'real world'.

Consequently, Parkin demonstrates how Bitcoin and other blockchains are produced across a multitude of tessellated spaces from which certain stakeholders exercise considerable amounts of power over their networks. While money, code, and space are certainly transformed by distributed ledgers, algorithmic decentralisation is rendered inherently paradoxical because it is predicated upon centralised actors, practices, and forces"--

This book provides a comprehensive investigation of the messy and crisis-ridden relationship between the operations of capitalist finance, global capital flows, and state power in emerging markets. The politics, drivers of emergence, and diversity of these myriad forms of state power are explored in light of the positionality of emerging markets within the network of space and power relations that characterises contemporary global finance. The book develops a multi-disciplinary perspective and combines insights from Marxist political economy, post-Keynesian economics, economic geography, and postcolonial and feminist International Political Economy. Alami comprehensively reviews the theories, histories, and geographies of cross-border finance management, and develops a conceptual framework which allows unpacking the complex entanglement of constraint and opportunities, of growing integration and tight discipline,

that cross-border finance represents for emerging markets. Extensive fieldwork research provides an in-depth comparative critical interrogation of the policies and regulations deployed in Brazil and South Africa. This volume will be especially useful to those researching and working in the areas of international political economy, contemporary geographies of money and finance, and critical development studies. It should also prove of interest to policy makers, practitioners, and activists concerned with the relation between finance and development in emerging markets and beyond.

This collection examines the economic, social and cultural manifestations that go to make up the multiple visions of money.

Following the catastrophic events of the 2008 global financial crisis, an anonymous hacker released Bitcoin to claw back power from commercial and central banks. It quickly garnered an enthusiastic following who sought to forge a stable and democratic global economy--a world free from hierarchy and control. In their eyes, Bitcoin's underlying architecture, blockchain, hailed the dawn of decentralisation. Money Code Space shatters these emancipatory claims. In their place, Jack Parkin constructs a new framework for revealing the geographies of power that lie behind blockchain networks. Drawing on first-

hand experience in cryptocurrency communities and start-up companies from Silicon Valley to London, Parkin untangles the complex web of culture, politics, and economics that truly drive decentralisation.

Innovation in money is just as important as innovation in any other sphere of activity; money is always a “work in progress.” In fact, history shows societies have tried out a wide diversity of monetary arrangements. Ideas about money have played key roles at crucial turning points in world history and during national histories. Recently, a new global money space has been created, a joint venture between the public and private sector. This book explores the new money society that has grown up to inhabit this new space. The book has several aims: Firstly, the book shows how beliefs about money, as well as attitudes and values towards it, have varied between societies and over time, and specifically how they have changed over the modern era. Secondly, the book shows the powerful effects that changing ideas have had on events, including wars and revolutions, recessions, booms and financial crises. Thirdly, the book recounts the creation of a global money space, dated to the last quarter of the 20th century, and explores its features. Fourthly, the book describes some characteristics of the new money society that inhabits the global money space. Fifthly, the book shows how each society, and indeed

successive generations of the same society, has made its own unique arrangements to govern money - i.e. how it comes to terms with the power of money. The author argues that we need to develop a new arrangement now and suggests that we have much to learn from recent creative work in a number of fields ranging from the sociology of money to contemporary art. This approach sheds new light on a number of controversial issues, including the rise of crony capitalism, growing social divisions, currency wars, and asset price bubbles.

The first inside look at how sex workers use webcams to make a living The erotic webcam industry, also known as "camming," is a thriving global business. She provides an inside look at the public and private shows between cam models and their customers, from exotic dancing and pornographic videos, to masturbation shows and erotic chatrooms. Was 2008 just a foreshock and something more terrible is awaiting us? What will happen to your job, savings, pension, and the future of your children? Are any investments safe? Understanding will give you an important edge to protect yourself, your family from the consequences of the coming crisis. But, to get real protection we need a new monetary system that is safe and beneficial for everyone, and for this we need to get politicians into power who think and act differently; today an engineering attitude is essential, simply because people with an engineering attitude know how to make things work.
