This book provides in simple terms the methods of examining cattle using only the facilities available in general veterinary practice. The book concentrates on the importance of the initial history taking and general examination. Each major sign is followed by a listing of the most common conditions which result in its occurrence. There are also tables on the differential diagnosis of the more common conditions affecting the various body systems. Outline of Clinical Diagnosis in Cattle will be an invaluable reference for vets in mixed practice and for students in their final year. Farmers and stockmen will also find the book of interest

This concise textbook of differential diagnosis was originally written for students and new graduates, and for the non-equine veterinarian seeking to become proficient in handling the increasing volume of equine work which is becoming available. A number of changes have taken place since the first edition was published, although the original purpose remains. This edition has been fully updated throughout - some sections, for example, lameness, have been completely rewritten to make it easier for readers to refer to any particular condition

and to include more sophisticated modern diagnostic techniques. Ultrasonic techniques are included for the first time and there is a new section devoted to methods of pregnancy diagnosis. Several new conditions are introduced - pemphigus, Cushings syndrome and thyroid dysfunction, for example, and the section on skin diseases has been expanded.

A guide to advanced assessment and clinical diagnosis, this text is organized in a body systems framework and focuses on the adult patient. Each chapter focuses on a major problem associated with each particular body system.

This book aims to provide those involved in caprine medicine with a readily accessible text covering the more common clinical problems likely to be encountered with the species. The major presenting signs are covered in individual chapters with each chapter beginning with the assessment and clinical examination of the patient, followed by further investigations which may aid diagnosis and finishing with a consideration of specific diseases, their diagnosis, clinical signs and treatment. There are also chapters on plant poisoning, anaesthesia and disbudding/dehorning. Veterinary students and practitioners will find Outline of Clinical Diagnosis in the Goat an invaluable reference book, as will those involved in goat keeping
