A vital resource for pilots, instructors, and students, from the most trusted source of aeronautic information.

Fly toward pilot certification with these real-world scenario exercises. Although PC-based flight simulations have been available for 30 years, many pilots, instructors, and flight schools don't understand

how best to use these tools in real-world flight training and pilot proficiency programs. This invaluable reference bridges the gap between simulation tools and real-world situations by presenting hands-on, scenario-based exercises and training tips for the private pilot certificate and instrument rating. As the first of its kind based on FAA-Industry Training Standards (FITS), this book steers its focus on a scenario-based curriculum that emphasizes real-world situations. Experienced pilot and author Bruce Williams ultimately aims to engage the pilot, reinforce the "realistic" selling point of PC-based flight simulations, while also complementing the FAA-approved FITS syllabi. Serves as essential reading for pilots who want to make effective use of simulation in their training while expanding their skill level and enjoyment of flying Covers private pilot real-world scenarios and instrument rating scenarios Includes a

Pilots, aviation students, kitplane builders, aircraft fleet operators and aeronautical engineers can all determine how their propeller-driven airplanes will perform, under any conditions, by using the step-by-step bootstrap approach introduced in this book. A few routine flying manoeuvres (climbs, glides, a level speed run) will give the necessary nine numbers. High-school level calculations then give performance numbers with much greater detail and accuracy than many other methods - for the reader's individual aircraft.
