economic growth and poverty reduction. Reform is needed to regain momentum because fiscal imbalances and rising public debt could jeopardize macroeconomic stability. The economy would benefit from significant trade and commercial policy reform. The labor market suffers from sluggish growth of formal sector employment and from skills mismatches, which can be addressed by changes in education policy and systems. The book analyzes these and related critical constraints on the Sri Lankan economy, and proposes a set of policy reforms that would lay the foundations for more rapid and inclusive development.

In this book Fulya Apaydin argues that labor responses to dramatic technological change are influenced by the political institutions of the Global South more than any other factor. In addressing vocational education programs – which are highly relevant in understanding how labor unrest is governed in developing settings – she makes two important contributions. Firstly, she offers a new theoretical framework to understand labor mobilization and de-mobilization patterns, rethinking vocational education as a key transmission belt for manufacturing labor consent. Secondly, she provides a systematic comparison of skill formation schemes and their implications on labor

mobilization in federal and unitary systems. With a focus on Argentina and Turkey, two case studies are provided in which technology has provoked differing levels of strikes, walkouts and extended protest.

The crisis in trade unionism is now a prevailing concern in the United States, as well as in Europe. Its main symptom is, of course, the decrease in union membership. Still, other, less observable elements account for the concern, namely the obsolescence of discourse, the decrease of militant motivation, and the question of efficiency of strikes or collective bargaining. This book adds to the assessment by integrating the new theories of organizations, contracts, and property rights. In doing so, we shift from a study of markets to one of hierarchies. Thus, the current literature comes back to its sources (but with improved analytical instruments) by returning to the Ross-Dunlop debate on the nature of the trade union. This more complex outlook of trade unions as an organization-not only as an abstract or bodyless supplier of monopolistic labor-allows one to understand better the apparent differences between unions (mainly American) whose action is oriented towards work relations and labor contract management and unions (European or "Latin") who are

closer to a pressure group wielding power on the political front.

This volume contains sixteen original articles documenting recent progress in understanding strategic behaviour. In their variety they reflect an entire spectrum of coexisting approaches: from orthodox game theory via behavioural game theory, bounded rationality and economic psychology to experimental economics. There are plenty of new models and insights but the book also illustrates the boundaries of what we know today and explains the frontiers of tomorrow. The articles were written in honour of Werner Güth.
