This book is packed with practical, do-able travel tips for families who have children with sensory processing disorder. If your child has sensory processing disorder, autism, developmental disabilities or behavioural challenges you will find helpful tips that will get you started planning your travels. There are tips that will help if you are traveling to your dream destination, traveling for medical purposes, going for a road trip for the weekend, going to the beach for a day trip or even just visiting your relatives for the holiday season. The book contains helpful tips for handling crowds, shopping trips, airport security, hotel minibars, theme parks, camping, minimizing escapism while traveling and more!

This book is packed with practical, do-able travel tips that will get you started planning your dream vacation. The book contains helpful tips for handling crowds, airport security, hotel minibars, theme parks, camping, minimizing escapism while travelling and more!

Sharon Garlough Brown tells the moving story of four strangers as they reluctantly arrive at a retreat center and find themselves drawn out of their separate stories of isolation and struggle and into a collective journey of spiritual practice, mutual support and personal revelation.

EBONY is the flagship magazine of Johnson Publishing. Founded in 1945 by John H. Johnson, it still maintains the highest global circulation of any African American-focused magazine.

A adaptação do guia para o inglês foi preparada especialmente para os turistas estrangeiros que queiram conhecer o Brasil sob o ponto de vista do patrimônio histórico, cultural e natural. Entre as novidades, estão informações específicas para este público

The MIT based SENSEable City Lab under Carlo Ratti is one of the research centers that deal with the flow of people and goods, but also of refuse that moves around the world. Experience with large-scale infrastructure projects suggest that more complex and above all flexible answers must be sought to questions of transportation or disposal. This edition, edited by Dietmar Offenhuber and Carlo Ratti, shows how Big Data change reality and, hence, the way we deal with the city. It discusses the impact of real-time data on architecture and urban planning, using examples developed in the SENSEable City Lab. They demonstrate how the Lab interprets digital data as material that can be used for the formulation of a different urban future. It also looks at the negative aspects of the city-related data acquisition and control. The authors address issues with which urban planning disciplines will work intensively in the future: questions that not only radically and critically review, but also change fundamentally, the existing tasks and how the professions view their own roles.

After the start of the Syrian Civil War in 2011-12, increasing numbers of civilians sought refuge in neighboring countries. By May 2017, Turkey had received over 3 million refugees — the largest refugee population in the world. Some lived in government-run camps near the Syrian border, but many have moved to cities looking for work and better living conditions. They faced problems of integration, income, welfare, employment, health, education, language, social tension, and discrimination. In order to develop sound policies to solve these interlinked problems, a good understanding of refugee dynamics isnecessary. This book summarizes the most important findings of the Data for Refugees (D4R) Challenge, which was a non-profit project initiated to improve the conditions of the Syrian refugees in Turkey by providing a database for the scientific community to enable research on urgent problems concerning refugees. The database, based on anonymized mobile call detail records (CDRs) of phone calls and SMS messages of one million Turk Telekom customers, indicates the broad activity and mobility patterns of refugees and citizens in Turkey for the year 1 January to 31 December 2017. Over 100 teams from around the globe applied to take part in the challenge, and 61 teams were granted access to the data. This book describes the challenge, and presents selected and revised project reports on the five major themes: unemployment, health, education, social integration, and safety, respectively. These are complemented by additional invited chapters describing related projects from international governmental organizations, technological infrastructure, as well as ethical aspects. The last chapter includes policy recommendations, based on the lessons learned. The book will serve as a guideline for creating innovative data-centered collaborations between industry, academia, government, and non-profit humanitarian agencies to deal with complex problems in refugee scenarios. It illustrates the possibilities of big data analytics in coping with refugee crises and humanitarian responses, by showcasing innovative approaches drawing on multiple data sources, information visualization, pattern analysis, and statistical analysis.It will also provide researchers and students working with mobility data with an excellent coverage across data science, economics, sociology, urban computing, education, migration studies, and more.

Recent advances in information and communication technologies have enhanced the standards of metropolitan planning and development. These innovations have led to new opportunities in this evolving profession. Emerging Issues, Challenges, and Opportunities in Urban E-Planning brings together the efficiency of web-based tools and digital technologies with the practice of spatial planning. Focusing on the utilization of geographic information systems, computer-assisted design, visualization concepts, and database management systems, this book is a pivotal reference source for planners, policymakers, researchers, and graduate students interested in how recent technological advancements are enhancing the traditional practices in urban planning.

The Babysense Secret provides an easy-to-follow method to care for a baby during the first year. It explains how to read a baby's body language and signals, so that parents can know how their baby is feeling and what he wants. They can use this knowledge to guide their baby into a gentle routine which is convenient for the whole family and good for the baby's physical and emotional development. Some of the most common parental concerns in a baby's first year are: • Why is my baby crying? • How can I get my baby to sleep well? • How can I encourage my baby's development? • How can I make some time for myself? The Babysense Secret reveals that the answer to these concerns lies in a baby's senses and signals. At birth, a newborn is bombarded with new sensations that can make him over-stimulated; if parents can regulate his world during the first few months they will find that their baby is calmer and happier. All babies give signals to communicate with their parents—by learning to read these signals, parents can structure a flexible routine around their baby which will be beneficial to both. Babies go through a cycle of different states throughout the day: asleep, drowsy, calm-alert, active-alert, and crying. Parents can tell which state their baby is in from his signals—his body language and facial expressions. A routine can be structured around the states the baby goes through, so that parents aren't trying to get their baby to sleep when he is awake and wants to play. This baby-centric approach is the key to having a child who is happily awake, learning from his world or falling asleep with ease and sleeping peacefully for long stretches. Being able to interpret and respond to a baby's signals will keep him at ease, minimize colic, and provide the best environment for encouraging development. This ebook in PDF format contains at-a-glance charts which will show parents what to do in the middle of the night when their baby is crying inconsolably, and flow diagrams to work out exactly what their baby is trying to tell them, and the best methods to help.
