Bridges the gap between aphasia research and the rehabilitation of patients with this language disorder. Studies of the deficits underlying aphasia and the practice of aphasia rehabilitation have often diverged, and the relationship between theory and practice in aphasiology is loose. The goal of this book is to help close this gap by making explicit the relationship between what is to be rehabilitated and how to rehabilitate it.

Evidence-based and yet very practical, Equine Thermography in Practice discusses how to use the tool in the diagnosis of equine musculoskeletal injuries and what the user can expect to see in normal versus injured horses giving guidelines for best practice. The book builds from basics covering the principles of thermography and then its applications in equine veterinary medicine and the role of the technique regarding the equestrian athlete as well as in rehabilitation. Extensively illustrated and thoroughly referenced, this book is indispensable to novice and experienced practitioners using the technique, including: equine veterinarians and equine physiotherapists and body work practitioners.

Space propulsion systems have a great influence on our ability to travel to other planets or how cheap a satellite can provide TV programs. This book provides an up-to-date overview of all kinds of propulsion systems ranging from classical rocket technology, nuclear propulsion to electric propulsion systems, and further to micro-, propellantless and even breakthrough propulsion, which is a new program under development at NASA. The author shows the limitations of the present concepts and how they could look like in the future. Starting from historical developments, the reader is taken on a journey showing the amazing technology that has been put on hold for decades to be rediscovered in the near future for questions like how we can even reach other stars within a human lifetime. The author is actively involved in advanced propulsion research and contributes with his own experience to many of the presented topics. The book is written for anyone who is interested in how space travel can be revolutionized.

Virtually all philosophers agree that for a belief to be epistemically justified, it must satisfy certain conditions. Perhaps it must be supported by evidence. Or perhaps it must be reliably formed. Or perhaps there are some other 'good-making' features it must have. But does a belief's justification also require some sort of awareness of its good-making features? The answer to this question has been hotly contested in contemporary epistemology, creating a deep divide among its practitioners. Internalists insist that such awareness is required for justification whereas externalists insist that it isn't. The first part of Michael Bergmann's book argues that internalism faces an inescapable dilemma: either it leads to vicious regress problems and, ultimately, radical skepticism, or it is entirely unmotivated. The second part of the book begins by developing the author's own externalist theory of justification, one imposing both a proper function and a no-defeater requirement. Bergmann concludes by demonstrating the failure of two prominent critiques of externalism, namely, that it is infected with epistemic circularity and that it cannot respond adequately to skepticism. Together, the two parts of the book provide a decisive refutation of internalism and a sustained defense of externalism. Moreover, they do so while placing a high priority on making the author's opponents feel that their positions and objections are understood.

Landlocked countries are among the most disadvantaged countries in the world. This publication analyses the impact of geographical handicaps on the external trade and economic development of landlocked developing countries, and identifies practical solutions to address them. It examines the corridor approach for establishing efficient transit systems and outlines the challenges faced and responses of different landlocked subregions. It considers major international conventions essential for securing freedom of transit and outlines international support measures for establishing efficient transit systems.
